

**Editor's Comment:**

The manuscript can be accepted for publication after carrying out the following suggestions.

## Suggestion for authors

1. Check the abbreviations throughout the manuscript and introduce the abbreviation when the full word appears the first time in the abstract and the remaining for the text and then use only the abbreviation (For example, oral glucose tolerance test (OGTT), etc.,).
2. In the materials and methods, the authors may cite references for standard protocol, manufacture instructions, if reference is given with it and the same should be added in the reference section.
3. The statement of informed consent should be added.
4. The authors have not included the statistical software and its version of the same used in the present study under the heading statistical analysis and it should be included properly (as given in the abstract).
5. The conclusion seems in general. All conclusions must be convincing statements on what was found to be novel impact based on the strong support of the data/results/discussion. Moreover, the authors may also include the limitation of the present findings for a better understanding of the manuscript.
