

Review Form 3

Journal Name:	Asian Journal of Advanced Research and Reports
Manuscript Number:	Ms_AJARR_130004
Title of the Manuscript:	The Influence of Environmental Conditions on Flood Risk
Type of the Article	Research article

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	This manuscript addresses a critical and timely issue by examining the impact of environmental data and community behavior on flood disasters, highlighting the significance of waste management and residential patterns near riverbanks. The use of descriptive and inferential analyses, particularly OLS, adds rigor to the study and enhances its contribution to understanding the dynamics of flooding.	Suggestions: The manuscript could benefit from further elaboration on the methodology, particularly in detailing how data on community behavior and environmental variables were collected and quantified.
Is the title of the article suitable? (If not please suggest an alternative title)	The title "The Influence of Environmental Conditions on Flood Risk" is clear and descriptive, but it might not fully capture the scope of the study, especially if the manuscript emphasizes both environmental conditions and community behavior in relation to flood risk. Suggested title: Analyzing the Impact of Environmental and Behavioral Factors on Flood Risk	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	The abstract is clear and informative, presenting the study's objectives, methodology, and key recommendations. Suggestions: It can be made more comprehensive by incorporating how the study contributes to existing knowledge on flood risk and environmental behavior, emphasizing its novelty or significance. While the recommendations are practical and relevant, they could be streamlined to avoid overwhelming the reader, focusing on key actionable points. Lastly, beginning the abstract with a clear and direct statement of the study's objective, such as, "This study aims to analyze the impact of environmental conditions and community behavior on flood risk using OLS regression," would provide a strong foundation and immediately engage the audience.	Thanks for the comments.
Is the manuscript scientifically, correct? Please write here.	Yes, the manuscript is scientifically correct, as it employs appropriate methodologies and adheres to established principles in environmental science and disaster management.	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	The references in the manuscript are both sufficient and recent, ensuring a robust foundation for the study. They adequately cover the core topics, including flood risk, environmental conditions, waste management, and community behavior, while reflecting current knowledge and practices within the last 5–10 years.	Thanks for the comments.noted and revised.
Is the language/English quality of the article suitable for scholarly communications?	The language and English quality of the article are suitable for scholarly communication, with clear, concise, and formal writing that adheres to academic standards. The manuscript effectively conveys its objectives, methodology, and key findings in a manner accessible to researchers and practitioners.	Thanks for the comments. noted
Optional/General comments		

Review Form 3

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
