PART 1: Comments

| | Reviewer's comment | Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i> |
|--|---|---|
| Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part. | <ol style="list-style-type: none"> 1. In the abstract, it is best to write an analysis of the situation that is the basis for the research. For example, based on a preliminary survey, it is known how low the knowledge of teenagers is in what percentage. Even though it is only 1-2 sentences, it will strengthen why the research was carried out. 2. research design with descriptive research, please explain whether it is quantitative or qualitative. The subject is also explained whether teenagers, adults, children, elderly. Then it is also discussed a little about the inclusion and exclusion criteria. how to take samples using what formula. 3. In the written abstract there are statistical calculations which mean they are not descriptive but analytical. Please write whether it is case control, or cross sectional etc 4. In the research results it was stated that good knowledge was more numerous than low knowledge. Well, this needs to be explained in a discussion reinforced by journals or up-to-date reference sources which state that high knowledge does not necessarily mean good sexual behavior. My suggestion should be explained in depth as to why good knowledge is still problematic which gives rise to reproductive problems. You can also add an observation celist table to strengthen the reasons why there is still a problem with high levels of knowledge but reproductive health and the problem of sexually transmitted infections are still a problem. Researchers should also present literature evidence that says there is no relationship between knowledge and sexually transmitted infections | |
| Is the title of the article suitable? (If not please suggest an alternative title) | No, it is not. The relationship between sexual knowledge and behavior and the incidence of sexually transmitted infections in... | |
