Review Form 3

Journal Name:	South Asian Journal of Research in Microbiology
Manuscript Number:	Ms_SAJRM_128759
Title of the Manuscript:	PREVALENCE OF EXTENDED SPECTRUM BETA-LACTAMASE PRODUCING BACTERIA IN PATIENTS WITH WOUND INFECTIONS ATTENDING TERTIARY HOSPITALS IN ENUGU, NIGERIA.
Type of the Article	Original Research Article

General guidelines for the Peer Review process:

This journal's peer review policy states that <u>NO</u> manuscript should be rejected only on the basis of 'lack of Novelty', provided the manuscript is scientifically robust and technically sound. To know the complete guidelines for the Peer Review process, reviewers are requested to visit this link: https://r1.reviewerhub.org/general-editorial-policy/

Important Policies Regarding Peer Review
Peer review Comments Approval Policy: https://rl.reviewerhub.org/peer-review-comments-approval-policy/
Benefits for Reviewers: https://rl.reviewerhub.org/benefits-for-reviewers

PART 1: Comments

	Reviewer's comment	Author's Feedback (Please correct the manuscript and highlight that part
		in the manuscript. It is mandatory that authors should write his/her feedback
		here)
Please write a few sentences regarding the importance		
of this manuscript for the scientific community. A		
minimum of 3-4 sentences may be required for this		
part.		
Is the title of the article suitable?		
(If not please suggest an alternative title)		
Is the abstract of the article comprehensive? Do you		
suggest the addition (or deletion) of some points in this		
section? Please write your suggestions here.		
Is the manuscript scientifically, correct? Please write		
here.		
Are the references sufficient and recent? If you have		
suggestions of additional references, please mention		
them in the review form.

Review Form 3

Is the language/English quality of the article suitable for scholarly communications?		
Optional/General comments	 Check punctuation, spacing, and grammar throughout the paper. Avoid invalid statements. For example, male had a higher frequency of ESBL. The reason was the number of male patients was double than females. The authors can't make any conclusion. The paper just stretches the findings. Microscopy of stained smear from the pus is not done to evaluate the pathogens which do not grow in ordinary media. Anaerobic culture not done. Aerobic culture incubation in 24 hrs is not enough for slow growing microbes. Disc diffusion is not a standard method to establish ESLB. MIC values are required. Table 1 and 4 are irrelevant. Conclusion: It is an incomplete study which does not fully follow scientific methods. 	

PART 2:

		Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
