

**Editor's Comment:**

Evaluate this interesting piece of research paper and found that the authors have done good jobs in revising their manuscript based on the majority of the scholastic comments/suggestions given by the reviewers as well as improving the manuscript in a good manner. However, there are still some ways that the languages of the manuscript can be improved as well as tables, citations and references are required to be formatted/ arranged and revised based on the prescribed guidelines of the journal before final printing. In addition, the abstract of the paper should be improved by incorporating few sentences of the objectives, main findings and implication of this research in it. Therefore, I recommend this paper for publication in "Annual Research & Review in Biology", with minor revisions/changes as suggested above.
