

Editor's Comment:

My comments are listed below:

1-I would like to see more motivations since much works have been done in the literature and not all cited. It is crucial to see novelties and motivations.

2-Conclusions must be more elaborated as well compared to the Abstract.

3-Regarding the analytical background, please address the problem more properly. The equation introduced is not enough to formulate the whole dynamics and simulations done. Although, no correlation between this equation and simulations have been mentioned properly.

4-Lots of Typos.

5-Missing lots of references in the field.

Please revise.

A major revision is recommended.
