

Editor's Comment:

1. Prima facie the topic is not found enough after so many years of the pandemic. At this juncture it would be more appropriate to collect some data and give some relevant suggestions to the concerned parties which the paper lacks
2. Title is ok but the content of the paper needs improvement and additions.
3. Abstract just gives an introduction to the paper theme, it does not explain the procedure applied for selection of papers included in review. Systematic review is suggested to be applied to the paper since it is just a review paper.
4. It is suggested to do a systematic review.
5. References are only till 2021 but there must have been more researches after that which is not covered in the paper.
6. The tense used in the paper needs correction to bring about symmetry all through the paper.
