Title of the Manuscript:	MICROVASCULAR RECONSTRUCTION OF MANDIBLE USING FREE FIBULA FLAPS: A Systematic Review
Type of the Article	Minireview Article

PART 1: Comments

	Reviewer’s comment	Author’s Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	The manuscript highlights the critical importance of mandibular reconstruction in cases of segmental abnormalities caused by trauma, infections, tumors, or other conditions. Here's why this work is significant: 1. Functional and Social Importance: The mandible plays a vital role in essential functions like chewing, swallowing, and speaking. When its continuity is disrupted, it can cause not just functional but also aesthetic and social challenges, greatly impacting the quality of life. 2. Immediate Reconstruction: The manuscript underscores that immediate reconstruction is crucial to restore both the functional and aesthetic integrity of the mandible, minimizing long-term complications. 3. Focus on Microvascular Free Fibula Grafts: It evaluates outcomes of mandibular reconstruction using microvascular free fibula grafts, which are considered a gold standard. This approach ensures better functionality, stability, and aesthetic outcomes.	The importance of functionality and aesthetics has a grave importance in a patient’s psychology hence his immediate family and society. With the growing number of ablative surgeries in our country there is growing surge of reconstructive surgeries of the mandible. This manuscript gives the potential reader a means to judge the best reconstructive option for the patient hence in turn, increases his chance of acceptability of the surgery by him and his social circle. This roadmap not only improves patient prognosis and post operative psychology but also mass social awareness promoting good doctor patient relation.
Is the title of the article suitable? (If not please suggest an alternative title)	Yes ,it is	The title of the article is very aptly suitable requiring no changes.
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	No,It would be much better to describe methodology :material and methods and results of systematic review	The abstract have been improved according to the reviewer’s comments.
Is the manuscript scientifically, correct? Please write here.	yes	Yes
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	yes	Additional references have been added in the final manuscript according to the reviewers’ comments.
