The expression of genes and gluten quality in wheat is significantly influenced by planting dates and cultivars. Understanding these factors is essential for optimizing wheat production and quality .here's an overview of their importance: planting dates: timing the date when wheat is planted affects its growth stages, including germination, heading and maturity. Effects of climate: early planting may expose crops to varying temperatures that can enhance or inhibit gene expression related to gluten content. Late planting may lead to lower yields and a shift in nutrient availability.	Thanks
