Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	A numerical modelling is an accurate and economical tool to simulate and predict the head and quality of groundwater in coastal aquifers if it is properly calibrated using the available measurements of heads, pumping rates, and boundary conditions. The article presents the fundamental principles and mechanisms of seawater intrusion into coastal aquifer. In addition, different applicable mathematical models for seawater intrusion into coastal aquifer stated in this review as visual MODFLOW, MT3DMS routines, SEAWAT-2000 routines and FEFLOW routines are presented.	Satisfactory
