

Review Form 3

Journal Name:	Journal of Geography, Environment and Earth Science International
Manuscript Number:	Ms_JGEESI_130735
Title of the Manuscript:	A Review of Water Resources Quality and Contamination Sources in Malawi: Implications for Sustainable Water Management and Public Health
Type of the Article	Review Article

General guidelines for the Peer Review process:

This journal's peer review policy states that **NO** manuscript should be rejected only on the basis of '**lack of Novelty**', provided the manuscript is scientifically robust and technically sound.

Review Form 3

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	Manuscript is good for wider readability of authors and general people and its is moreover confined with the water quality of Malawi.	Thanks
Is the title of the article suitable? (If not please suggest an alternative title)	Yes it is suitable for publication	Thanks
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	Yes , but few more things like interrelationship of data, values, characteristics of water quality have also required to add inside the abstract text.	This review investigates water quality issues in Malawi, revealing critical contamination sources such as industrial discharges, agricultural runoff, household waste, mining operations, and inadequate wastewater management. A systematic search was conducted across several databases, focusing on literature published from 2018 to 2024, encompassing peer-reviewed articles, reports, and government publications. Findings underscore significant public health risks associated with poor water quality, including waterborne diseases and long-term health effects. The study advocates for the implementation of a continuous water quality-monitoring framework, enhanced regulatory measures for wastewater discharge, and effective community education initiatives on sustainable water practices. The recommendations presented herein aim to inform policymakers, researchers, and local communities, guiding future research directions and practical solutions to mitigate water contamination and improve public health outcomes in Malawi.
Is the manuscript scientifically, correct? Please write here.	Yes	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	Yes they are sufficient, few more references with my previous work are also required to be cited in the manuscript, (Tewari Anurag et al)	
Is the language/English quality of the article suitable for scholarly communications?	Yes	
Optional/General comments		

PART 2:

	Reviewer's comment	Author's comment <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
