A minimum of 3-4 sentences may be required for this part.	<ul style="list-style-type: none">The manuscript explores non-IgE-mediated allergic rhinoconjunctivitis, focusing on immunoreactivity to citrus allergens and pollen.It assesses Tube Titration of Precipitins (TTP) and Leukocyte Adherence Inhibition Test (LAIT) as tools for distinguishing cellular and humoral immune responses.The study highlights cross-reactivity between pollen and citrus fruits, which is significant in understanding fruit-pollen syndrome.Findings suggest that LAIT provides better differentiation of immunoreactivity compared to TTP, making it a potential diagnostic tool.The research contributes to precision medicine by identifying biomarkers for hypersensitivity and guiding personalized allergy treatment.It emphasizes the need for alternative diagnostic approaches beyond traditional IgE-based tests, especially for patients with inconclusive skin tests.The study also supports the use of immunological endotyping to classify different allergic responses, improving targeted therapies.
