Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	<i>Meloidogyne</i> , commonly known as root-knot nematodes, are plant-parasitic nematodes that can infect various crops, including tuberose (<i>Polianthes tuberosa</i>). Once infected with this are very difficult to control or manage the losses. Therefore the manuscript entitled with "Integrated Management Modules for Root-Knot Nematode (<i>Meloidogyne incognita</i>) in Tuberose" will be a great help for farmers as well as for all the tuberose cultivar. This broad host range of Root knot nematode makes it a persistent challenge in agricultural and horticultural systems, as it can spread easily from one crop to another, leading to significant losses across multiple crops.
