

Review Form 3

Journal Name:	International Neuropsychiatric Disease Journal
Manuscript Number:	Ms_INDJ_130955
Title of the Manuscript:	Management of Bipolar Affective Disorder: Drug Interactions and Toxicity
Type of the Article	Original Research Article

PART 1: Comments

	Reviewer’s comment	Author’s Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	Antipsychotic and antidepressant medications are among the most important, common, and available medications. Toxicity with them is common, and drug interactions are also common. Lithium is one of the most common of these. It is very important and valuable to examine its side effects and interactions.	
Is the title of the article suitable? (If not please suggest an alternative title)	No. In general, most of the discussion was about lithium toxicity, while the title was about all drug interactions and all medications. Therefore, the title should be changed to Lithium Toxicity in Patients with Mood Disorders	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	yes	
Is the manuscript scientifically, correct? Please write here.	It would have been better to discuss and research the type of drug interactions with lithium. Which other drugs (such as benzodiazepines or sodium valproate) increase lithium toxicity or cause toxicity?	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	YES	
Is the language/English quality of the article suitable for scholarly communications?	yes	
Optional/General comments	In general, most of the discussion was about lithium toxicity, while the title was about all drug interactions and all medications. Therefore, the title should be changed to Lithium Toxicity in Patients with Mood Disorders. In addition, it would have been better to discuss and research the type of drug interactions with lithium. Which other drugs (such as benzodiazepines or sodium valproate) increase lithium toxicity or cause toxicity? Part of the discussion states that lithium poisoning has no specific treatment, while lithium poisoning is well treated with dialysis.	

Review Form 3

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	(If yes, Kindly please write down the ethical issues here in details)
