

Review Form 3

Journal Name:	Journal of Advances in Medicine and Medical Research
Manuscript Number:	Ms_JAMMR_130150
Title of the Manuscript:	EXTENSIVE DERMATITIS DUE TO HYPERSENSITIVITY TO ORTHOPEDIC SYNTHETIC MATERIALS: CASE REPORT
Type of the Article	Case report

PART 1: Comments

	Reviewer's comment	Author's Feedback <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.	Hypersensitivity is a common surgical side effect especially in metallic prosthesis (most extensively used) considering they are made of stainless steel which is an alloy – which is well documented but the reason such reports are still relevant is because it leads to increase in scientific knowledge of clinical signs and symptoms to diagnose the same and the Need/discovery of newer Biomaterials.	
Is the title of the article suitable? (If not please suggest an alternative title)	“EXTENSIVE DERMATITIS DUE TO HYPERSENSITIVITY TO ORTHOPEDIC SYNTHETIC MATERIALS: CASE REPORT” Extensive is Not a medical word to grade the dermatitis and cannot be used to describe the condition kindly remove it	
Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.	+The conclusion in the abstract should be crisp and short – a single line inference not written like an Introduction (without any background) idealistically should emphasise on the need for alternate materials instead of stainless steel. (Authors choice)	
Is the manuscript scientifically, correct? Please write here.	Yes	
Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.	Yes	

Review Form 3

<p>Is the language/English quality of the article suitable for scholarly communications?</p>	<p>Yes</p>	
<p>Optional/General comments</p>	<p>+The very first line of introduction should not be a reference as it makes reading it like a textbook and not in 3rd person please add a sentence or 2 as background and not direct statistics. +This is a case report, every mention of drugs (antobiotics/ analgesics/steroids) must have dose and course. +Presurgical Workup must be disclosed including presurgical steroids/ blood tests – if nothing special was done can be listed as routine presurgical workup was done +“Afterwards, an infection was detected in the operative site” – twice it was considered negligible but this time was considered relevant -based on what? must be explained?? +surgery to fix the olecranon- Surgery must be explained in 3-5 sentences at least to Rule out Negligence in your case report. +All confirmation seems clinical/Chair side No histology evaluated for Eosinophil Infiltrate or evidence of allergy ? And how to rule out false positive in patch test without Histology? +LMIT and (LTT) was not done and must be mentioned as a flaw of the study along with absence of disclosure of Any blood work in the write up. +Kindly re-write Manuscript in 3rd person in a more active manner emphasizing to chronology of events which lead to diagnosis (because that is all a case report has to offer) not just past tense of an incident. +No Xray? No Clinical Picture or surgical site? No histology? No blood report? in 21st century – add any one of these if available to increase scientific value of the study.</p>	

PART 2:

	<p>Reviewer’s comment</p>	<p>Author’s comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</p>
<p>Are there ethical issues in this manuscript?</p>	<p><i>(If yes, Kindly please write down the ethical issues here in details)</i></p>
