### Review Form 3

#### **PART 1: Comments**

	<b>Reviewer's comment</b>	<b>Author's Feedback</b> <i>(Please correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Please write a few sentences regarding the importance of this manuscript for the scientific community. A minimum of 3-4 sentences may be required for this part.</b>	This manuscript provides valuable insight into the rare clinical presentation of pneumatosis intestinalis (PI) complicated by pneumoperitoneum. It highlights the diagnostic challenges and surgical decisions required in such cases. The case adds to the limited literature on PI and its varied etiologies, reinforcing the need for a careful clinical and radiological approach	
<b>Is the title of the article suitable? (If not please suggest an alternative title)</b>	The title is appropriate	
<b>Is the abstract of the article comprehensive? Do you suggest the addition (or deletion) of some points in this section? Please write your suggestions here.</b>	The abstract is comprehensive but could briefly mention the role of imaging techniques in diagnosis and the significance of post-operative follow-up in managing such cases.	
<b>Is the manuscript scientifically, correct? Please write here.</b>	The manuscript is scientifically accurate, but the discussion could benefit from a clearer distinction between different etiological theories and their relevance to the presented case.	
<b>Are the references sufficient and recent? If you have suggestions of additional references, please mention them in the review form.</b>	The references are mostly recent but could be enhanced by including more recent studies on PI and pneumoperitoneum from 2023 and beyond.	
<b>Is the language/English quality of the article suitable for scholarly communications?</b>	The language is mostly suitable for scholarly communication, though minor grammatical improvements could be made for clarity and flow.	
<b>Optional/General</b> comments	Although the report mentions taking samples for histopathological examination, the results or relevance of these findings are not provided, The report ends with the patient being discharged with ongoing abdominal discomfort. It would be useful to discuss the long-term prognosis for patients with PI, particularly how recurrent episodes are managed and whether any complications are typically expected in such cases.	

#### **PART 2:**

	<b>Reviewer's comment</b>	<b>Author's comment</b> <i>(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)</i>
<b>Are there ethical issues in this manuscript?</b>	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
