Review Form 3

Is the language/English quality of the article suitable for scholarly communications?		
<u>Optional/General</u> comments	Overall the study seems well conducted and the study well written.  I would like it to be better clarified in the introduction why it was chosen to conduct this study and why in Jamaica.  In the Results it is not immediately clear who was treated with finasteride and who with dutasteride.  The Conclusion is too concise, I would also speak a little about other adverse events (at least one more sentence).  By fixing these little things, I like the rest.
